

ICONS

Throughout this section there are various icons to help you with your product selection.

This operator is tested in conformity with EUROPEAN STANDARDS on impact forces.

The 230V gearmotors are designed for use in every day situations.

The 24V DC gearmotors are designed for INTENSIVE DUTY, and are powered by low voltage.

The 230 – 400V AC 3-PHASE versions are ideal for INDUSTRIAL use as they guarantee greater gearmotor starting thrust.

This WIRELESS product is battery-powered and operates with radio technology.

This product can be remotely controlled via CAME Connect cloud technology (visit www.fhbrundle.co.uk for full details).

This product comes with the CAME 3 year warranty.

This product is compatible with CAME Key (visit www.fhbrundle.co.uk for full details).

We would always advise you spec your jobs with safety edges. When you see this symbol it is imperative that one is used.

CAME sliding gate operators use either a Mod.4 or a Mod.6 rack.

This is a unit of measurement for how big the teeth are on the motor wheel. If your motor is 'Mod.4', you need a 'Mod.4' rack to attach to your gate.

This kit is Always Connected and comes complete with GSM Connect module and pre-activated SIM card, all for FREE.

Scan for more information

230-400v AC 3 phase motors are specifically designed for heavy industrial use.

If you are unsure about installing gate automation and any of the safety aspects we strongly recommend attending a training course.

Please note: Illustrations throughout this section may display items that are not necessarily supplied in the standard kits we offer. All listed equipment available separately. The installation of infrared-beams or mechanical-contact safety edges is essential if a careful risk analysis requires it. Certain items listed in the kits throughout the catalogue (namely control boards, remote controls or safety photocells) may be substituted without prior notice for a comparative alternative if the advertised item is temporarily out of stock.

Gate Automation

SAFETY STANDARDS

All products are rigorously tested at CAME's research facility in Italy to ensure they meet strict European safety standards, and come with a full 3-year manufacturers warranty. However, once these products are fitted to a gateway it becomes the responsibility of the gate manufacturer / installer to ensure that the installation is compliant with European Machinery Directive 2006/42/EC and with all currently applicable European standards. Whenever you see the 'EN Tested' logo in this catalogue, it means that product is force-limited, making it even easier for installers to comply with the legislation without additional safety accessories.

Sliding Door Gear
Gate Automation
Mesh
Decking & Subframe
Flooring & Stair Treads
Handrailing
Fencing
Fixings

Features:

- Buried underground, Frog is the most popular method of automating a gateway
- Corrosion resistant & reliable in damp conditions
- The irreversible geared motor firmly locks the gates
- FROG-AE model features encoder based electronics for easier EN compliance
- Manual release mechanism in the event of a power cut
- Perfect for wooden or metal gates

We would always advise you spec your jobs with safety edges. When you see this symbol it is imperative that at least one is used.

Suitable for the following gates:

- 2.0m gate leaves weighing up to 800kg
- 2.5m gate leaves weighing up to 600kg*
- 3.5m gate leaves weighing up to 400kg*

*We recommend provision be made for an 21LOCK81 electric latch if the leaf is wider than 2.5m, see page 293.

Features:

- Robust, sturdy & powerful
- Corrosion resistant & reliable in damp conditions
- Interchangeable supporting pin
- Automate large heavy gates up to 7m per leaf
- Suitable for high rates of traffic flow
- Easily maintained

To suit gates:

- 3.5m gate leaves weighing up to 1100kg
- 5.0m gate leaves weighing up to 800kg
- 7.0m gate leaves weighing up to 550kg

Note: We recommend the use of a 21LOCK81 electric latch on the gate leaf, see page 293.

24V Kit For Swing Gates Up To 5m Per Leaf

To SuitGates:

- 2.0m gate leaves weighing up to 1000kg
- 3.0m gate leaves weighing up to 700kg
- 5.0m gate leaves weighing up to 400kg*

AXO-524 Kit

Kit Includes:

- 1 or 2 x AXO 24V motors
- 1 x 24V control panel
- 1 x radio receiver
- 1 x tuned antenna
- 2 x remote controls
- 1 x pair safety photocells
- Full installation guide

For Use With Gates	Code
Single	21AXOS524
Double	21AXOP524

*We recommend provisions be made for a 21LOCK81 electric latch if the wing is wider than 4m, see page 293. Electric lock is mandatory for AXO-7 kits.

The most versatile worm drive motor on the market

ATS telescopic swing gate operator with increased C-Max capabilities where mounting posts are problematic.

- Telescopic swing gate operator offering a **C-Max potential of 200mm**
- Robust aluminium cover designed for easy 'installer access' to mechanical components with simple manual release
- Versatile and reliable, with 230V AC and 24V DC version for intensive use
- 24V operators are supplied with a built-in encoder for perfect slowdown management and obstacle detection
- Easy setup and installation. 24V kits are fully compatible with CAME Key, allowing easy setup with any smartphone or tablet - no internet connection required
- Smooth, silent and precise movement thanks to the design of the bevel gear motor
- Ergonomically designed with an axial gearmotor to maintain efficiency in the size and shape to the operator

C-Max Up To 200mm

Allowing for installation in any setting, even on very deep posts.

ATS is the universal solution, ideal for both residential settings and industrial installations.

It is a very versatile operator and thanks to the telescopic extension it is able to adapt perfectly to the different "depths" of the posts utilising the **increased C-Max of 200mm**.

Application Dimensions (mm):

Fixings

Features:

- ATS is perfect for automating lightweight gates in residential settings
- Flexible solution for different types of installations thanks to the **C-Max quote up to 200mm**
- One single motor for left/right installation

Dimensions (mm):

3 metre models

5 metre models

Suitable for the following gates:

- 3m gate leaves weighing up to 400kg
- 5m gate leaves weighing up to 400kg

Technology and Design:

ATS combines advanced performance with a refined design. Thanks to the axial transmission, the motor body does not protrude from the frame, for a slender and elegant shape. Furthermore, the bevel gear system allows smooth and silent movement.

ATS-S3 Kit

For use with gates up to 3m

Kit Includes:

- 1 or 2 x ATS 230V motors

Features:

- Automate gates hung from large brick or stone pillars
- Winding arm mechanism ensures fastest possible opening time
- Suitable for left or right mounting
- Encoder based electronics for easier EN compliance
- Manual release mechanism in the event of a power cut

Suitable for the following gates:

- 2.0m gate leaves weighing up to 800kg
- 2.5m gate leaves weighing up to 600kg
- 4.0m gate leaves weighing up to 400kg*

*We recommend provision be made for a 21LOCK81 electric latch, see page 293.

Simplified Installation

The utter versatility and special characteristics of this operator make each phase of professional installation much easier, user-friendly and accurate, especially when retrofitting.

- One single four-conductor cable to manage the power supply and slow-downs
- Memorises transmitters with different codes (up to 250 users)
- The control panel features a feature programming display

Fernie Kit

For use with gates up to 4m

Kit Includes:

- 1 or 2 x FERNI 230V motors + encoders
- 1 x 230v control panel
- 1 x radio receiver
- 1 x tuned antenna
- 2 x remote controls
- 1 x pair safety photocells

Features:

- 4 motors, all with encoder control
- Control board mounted at the top of the motor for ease of access following installation
- Possibility to install magnetic switches and heaters for the most critical climatic conditions
- Self-diagnosis of safety devices both wired and wireless
- Electronic circuit board, with separate terminal blocks and display, in order to facilitate easy installation
- Developed to connect with CAME Connect modules

CAME Connect allows you to remotely control all of the operators fitted to your system. Thanks to the internet, users and installers can now efficiently manage, 24/7, all of their automation and safety systems from any mobile device including smartphone, tablet or PC.

BXV Kit

Standard case

Kit Includes:

- 1 x 24V motor with built-in control panel
- 1 x radio receiver
- 1 x tuned antenna
- 2 x remote controls
- 1 x pair safety photocells
- Full installation guide

For Max. Use With Gates	Code
14m and up to 400kg	21BXV400GSKIT
18m and up to 600kg	21BXV600GSKIT
20m and up to 800kg	21BXV800GSKIT
14m and up to 1000kg	21BXV1000GSKIT

BXV Kit

Large case

Kit Includes:

- 1 x 24V motor with built-in control panel
- 1 x radio receiver
- 1 x tuned antenna
- 2 x remote controls
- 1 x pair safety photocells
- Full installation guide

For Max. Use With Gates	Code
14m and up to 400kg	21BXV400GFKIT
18m and up to 600kg	21BXV600GFKIT
14m and up to 1000kg	21BXV1000GFKIT

For extra safety protection where required, why not consider the RIO wireless safety system, see page 308. We would always advise you spec your jobs with safety edges. When you see this symbol it is imperative that at least one is used. See page 310.

For our range of telescopic gates see page 278.

Fixings

Features:

- 36V DC power for sliding gates up to 20m from 800kg up to 2500kg
- New adaptive torque – constant speed control and adaptive power to meet changing conditions
- Suitable for intensive use industrial applications
- Supersized cable entry points and multiple DIN rail mountings for ease of install
- New manual release mechanism
- CAME Connect ready straight out of the box

Dimensions (mm):

For extra safety protection also consider the RIO wireless safety system, see page 308.

New BKV Adaptive Torque

- BKV guarantees efficiency and low maintenance costs, thanks to the continuous torque adaptation.
- The ZN8 control panel manages, instant by instant, the motor speed, acceleration and deceleration phases, alongside the absorbed current.
- The adaptive torque system constantly evaluates gate weight and friction to detect obstacles and to keep the speed at the pre-set level.

Self-Calibration

All BKV motors have a self-calibration function built into the control board, which can be set up using the new full graphical display.

Sensitivity

Once the system is calibrated, the installer sets the sensitivity by measuring the thrust of each manoeuvre during operation.

Perfect operation throughout the full year

The continuous torque adaptation allows the motor to always be updated to possible friction variations and to perform consistently in every application, during any weather conditions.

Obstacle Differentiations

The Adaptive Torque Technology guarantees higher safety in the event of genuine obstacles. The motor can automatically differentiate between genuine obstacles and nuisance minor issues (dirt or small stones on the rail).

Scan to watch the BKV video

CAME Connect allows you to remotely control all of the operators fitted to your system. Thanks to the internet, users and installers can now efficiently manage, 24/7, all of their automation and safety systems from any mobile device including smartphone, tablet or PC.

New Manual Release System

Safety is our number one priority, which is why BKV has been designed and developed to eliminate accidents with a NEW direct drive robust manual release system.

The key protected system allows you to isolate the power via a quick release lever which will instantly disengage the motor in the case of an emergency.

Key protected manual release system

To disengage the motor, insert the key into the lock.

The power is automatically isolated

Unlocking the release door will automatically isolate the power.

Ready for releasing

With the power safely isolated the manual release is safe to proceed.

Directly disengage the motor

Opening the door will directly disengage the motor, allowing the gate to be manually operated.

CAME KEY

BKV has been designed with a dedicated slot for the new CAME KEY making installation and configuration easier and faster than ever before.

CAME KEY is a local WiFi interface that can communicate directly with your smartphone or tablet, allowing you to manage the configuration of your BKV with no need for an internet connection.

Complete Kits

BKV Kit

36V kit for sliding gates up to 20m

1500kg
2000kg

2500kg

Kit Includes:

Wireless Safety Accessories

RIO wireless accessories

Features:

- Quicker fitting times compared to traditional installations
- No digging or masonry work required
- No cables to lay
- Elegant, low-key design
- Compatible with any control panel
- Total safety in compliance with European standards
- Immediately brings your systems up to code, even if they are non compliant
- Reduced consumption
- Malfunction and low-battery alerts

Non-reversing gear motor with decoder for swing gates with leaves up to 2.2m long. Aluminium and ABS cover, worm screw based reduction system, crown and conical torque. This gear motor is designed to power swing gates in apartment blocks and homes.

Kit Includes:

- 2 x worm drive motors
- 1 x flashing light
- 1 x pair safety beams
- 2 x remote controls
- 1 x control panel
- Full installation guide

Features:

- Protection rating (IP): 44
- Control panel power supply (V - 50/60 Hz): 230 AC
- Power supply motor (V): 24 DC
- Max. draw (A): 5
- Max. power (W): 120
- Duty cycle (%): 50
- Opening time at 90° (s): 19
- Operating temperature: - 20 to + 55°C
- Insulation class: 3
- Reduction ratio (i): 1/36
- Thrust (N): 400 - 2000
- Weight (kg): 6.1*

*The weight of the motor includes the brackets. The motor alone weighs 4.6kg.

The new MTM GSM range from CAME is a telephone based door entry solution. Using GSM mobile or landline technology, this system is designed for applications where a hard wired door entry system cannot be installed. The MTM GSM entry panel range is simple, yet versatile and suitable for all, from small residential systems to large developments. Bespoke units with endless combinations can also be produced to suit every requirement.

MTM GSM Kits Include:

- 1 x modular entry panel
- 1 x PSU
- 1 x control unit
- 1 x antenna

VR GSM Intercom Systems

Vandal resistant MTM GSM audio intercoms

The new MTM GSM vandal resistant range from CAME has all the functions of the standard version. The profile and front facias are made entirely of Zamac composite and include crush resistant buttons and security screws. Offering the best in durability the MTM GSM VR range can resist up to IK09 level shocks and has an IP54 protection rating.

MTM GSM Kits Include:

- 1 x modular entry panel
- 1 x PSU
- 1 x control unit
- 1 x antenna

Handset video intercom, 5" LCD display, 2 programmable AUX keys - white. Surface mounted monitor with 5" colour LCD display. The camera monitoring, ringtone/mute, auxiliary and door release buttons are on the left along with the menu navigation.

Code
21AGATAVC

Dimensions (mm):

MTM has an extremely wide range of modular configurations in its range. It is equipped with modules that work on 5 different systems that allow many functions to be performed. The simplicity of the design makes the outdoor unit attractive on all surfaces and functional at the same time in everyday use. The satin aluminium finish guarantees brightness and durability.

The strong points of the MTM VR range is the durability and strength of the materials. It uses the same electronic modules and easy to fit functionality as the standard MTM, however, it uses an IK09 rated vandal resistant Zamak composite with crush proof buttons and anti-tamper screws.

The MTM kits shown here are configured for 1 or 2 modules. Please contact us for bespoke configurations of up to 4 modules.

MTM To AGT Standard

Video entry panel to AGT video handset

Kit includes:

- Audio-video module for X1 System
- Front piece for audio-video module with one button
- Frame with one-module profile
